

# Reflections, Tools, and Inventories

**Fly Five empowers** teachers to make informed instructional decisions and to support the implementation of SEL through reflections, tools, and inventories. With built-in formative assessments such as reflection questions and journal prompts, educators can easily monitor students' performance readiness throughout the lessons. To further SEL implementation, a variety of curriculum tools are available—from the Hopes and Goals Setting Module (HGSM), and professional development, to the Mindful Student. There are also two core inventories, the Social and Emotional Type Inventory (SETI) and the C-SETI, which identify areas of SEL strengths and growth for building both teacher and student competence.

**"Formative assessments give students essential formative feedback, helping them identify misunderstandings, deficiencies, and areas of opportunity in their own learning journey."**

*Bakula, N. The Benefits of Formative Assessments for Teaching*

## Benefits of Reflections, Tools, and Inventories

**Empowered Teacher Decision-Making**

**Data-Informed Instruction**

**Student-Centered Learning**

**Adaptable Scope and Sequence**

# Explore the instructional tools that Fly Five uses to empower teacher decision-making.

## Reflections

Formative Assessments

### Student Reflections Inform Instruction

- Found in every lesson, formative assessments come in many forms; such as open-ended questions and journal prompts.
- Teachers can utilize student feedback to gauge readiness to perform an SEL skill, and then re-teach if necessary.

## Curriculum Tools

HGSM, Professional Development, the Mindful Student

### Support Instructional and Professional Growth

- The HGSM allows teachers to compare their SEL strengths and growth from their SETI profile with the goals they have for their class. This offers teachers a clear starting point and path toward reaching those goals.
- Each professional development module includes an implementation tool that allows teachers to put their learning into practice.
- The Mindful Student offers short, actionable lessons to develop students' self-awareness and emotional regulation.

## Innovative Inventories

SETI and C-SETI

### Provide Valuable Data for Building SEL Competence

- The SETI is a typology inventory intended for adults to use to identify areas of strength and growth within their own social and emotional competence.
- The C-SETI is a grade-level inventory that is used by teachers to identify the social and emotional type for their classroom at the end of the school year. This inventory can be administered to an entire class, small group, or individual students.
